

# Patient Digital Device and Internet Access Assessment Workflow

## Suggestions on When to Conduct this Assessment with Patients

### Things to consider before administering this assessment to patients:

1. Which clinic staff have the time to collect and review the patient's answers on the assessment?
2. Does the designated staff have time to review necessary resources with the patient and assist with any sign-up, enrollment and/or activation steps?

**\*Please Note:** The provider is mentioned below in a few steps when discussing answers from the assessment, but it is understood that they may not have capacity to participate. We predict follow up on requested resources to be handled by other staff, including medical assistants, case managers, care managers, registration and enrollment staff, etc.
